

THE CHOICE OF THE PGA TOUR, USGA AND R&A FOR SWING AND BALL FLIGHT ANALYSIS

INSIDE OR OUT

TrackMan™ is available in an indoor and outdoor model. Both systems provide the same industry leading accuracy and data analysis performance. All you need to get started is a computer with a USB 2.0 port, the TrackMan™ unit, TrackMan™ software, and you're ready to swing.

TrackMan™ weighs just 12 pounds (less than 5.5 kg.) and can be carried in its own travel case. It comes with its own battery and takes less than two minutes to set up. Golf swings and shots to be analyzed just need to be hit in front of the unit, with no specific tee location required.

TrackMan™ Pro, the original version of our swing and ball flight analyzer, is a staple on the professional tours, with leading club fitters, manufacturers, retailers, universities, and instructors. The PGA Tour, R&A, and USGA, all choose TrackMan™ for their swing and ball flight analysis, as does broadcast TV to improve coverage.

TrackMan™ Pro is the first of its kind to map the entire flight of the golf ball from impact to landing, displaying its 3D trajectory in real time. At the same time, the solution provides a complete statistical analysis of the swing and ball flight with all the important club data and angles delivered to you in an easy to understand, ready to print, save or email report. TrackMan™ Pro can be used inside or outside, in any weather, with the same precision, confidence and stability.

TrackMan™ is a fantastic tool for measurement and analysis of ball flight. It has become an important part of our club fitting programs for tour players and amateurs alike.

David Leadbetter

The US Open is a great opportunity for the USGA to measure launch conditions and swing performance of the best golfers in the world. TrackMan™ has given us the ability to do this accurately, efficiently and reliably.

Dick Rugge, USGA Senior Technical Director

TrackMan™ Launch is the indoor only version of our swing and ball flight analyzer. Using the same hardware as the outdoor TrackMan™ Pro, it measures ball launch as well as the 3D movement of the club. Then instantly, using our proprietary world-class ball flight model, it calculates the length, dispersion and trajectory of the shot. Delivering to you an easy to use, easy to understand report based on the application you have chosen.

TrackMan™ needs only a short distance to determine ball flight information, making it the ideal tool for indoor club fitting, teaching, practice and fun. TrackMan™ has solved the challenges of consistency and accuracy that have plagued existing launch monitors. Providing the same precision, quality and stability you expect from TrackMan™ technology.

TrackMan™ helps you improve what really matters in golf, tangible numbers, no guesswork, improving your awareness. It has been a big part of our winning the NCAA championships.

Conrad Ray, Head Coach Stanford University Men's Golf Team

Learn how TrackMan™ will drive your profits

Golf instructors
Club fitters
Equipment manufacturers
Retailers
Tour professionals
Universities
Golf courses
Driving ranges

TrackMan™ is used by the world's leading tour players and coaches, equipment manufacturers, golf academies, golf courses, club fitters and by golf's governing bodies; the USGA and R&A.

Its industry leading accuracy and easy to use interface enable you to provide a new level of service to your customers, clients and students.
